 - **Mouse:** Windows-compatible 2-button or 3-button mouse (or with middle mouse wheel).
-

As an independent software vendor partner with Dell, Mastercam receives and tests their latest hardware offerings to make sure that they are compatible with Mastercam. Once a system is received, Mastercam is installed and we run tests to insure the hardware platform and its individual components work without error. By eliminating the issue of incompatibility, both software and hardware vendors help reduce troubleshooting and resolution. If the system meets our approval, it is deemed "certified" and then listed on [Dell's web page](#) as a supported and recommended system from running Mastercam.
